Standard and methodology

NYC Local Law 144 / EEOC four-fifths impact-ratio test. For each demographic category the selection rate (or, for scoring tools, the rate of scoring at or above the median) is computed, then the impact ratio = the category's rate divided by the highest category's rate. A ratio below 0.80 (four-fifths) is the long-standing EEOC threshold for potential adverse impact. Authority: 6 RCNY Sec. 5-300 et seq.; EEOC Uniform Guidelines 29 CFR 1607.4(D).

An impact ratio below 0.80 flags potential adverse impact and warrants further review; it is descriptive and is not by itself proof of unlawful discrimination. Computed only on the data provided; the audit itself simulates no records.

Evidence & attestation: NOT ATTESTED (demonstration only)

This output was generated without attestation. No ledger record was written, so there is no record hash, signature or public key to verify for it. The declared profile and the legal basis it was checked against are listed for reference only.
